

MXP-Distribution Management Suite:

Ensure your competitive position with end-to-end product control.

Key to managing a profitable enterprise is having control of your physical products. From sourcing to receiving, storage and picking, to the shipping process, inventory management can make -or break- your bottom line. The MXP Distribution Management Suite (DMS) provides full control of any inventory transaction at every level: bulk, lot, batch, or individual serial number. MXP DMS also allows the ability to expand that control outside the boundaries of the warehouse, with portals for vendor inventory management and customer self-service.

The MXP DMS suite integrates seamlessly into the Financial, Manufacturing and Service suites of the MXP system, with real-time processing of inventory valuations, issuance of materials to work orders, receipts from production and application of inventory to the stock technicians hold in their trunk. The concept of “entities” is also honored throughout the DMS flow, giving you the ability to totally segregate inventories and transactions by division and/or company. And, the system also lets you select the most appropriate costing methods for each warehouse or product group.

MXP's Distribution Suite puts all of our operational control in one place. Accurate, on time deliveries keep our customers coming back.

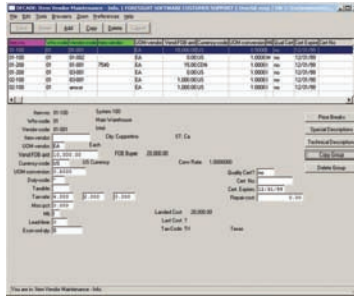

The MXP Distribution Management Suite:

- Provides definitive control of inventory items, including product groups, quantity- and customer-based pricing, item substitutions and customs/duty charges
- Allows you to create multiple warehouses and bins with user-defined storage methods
- Facilitates the creation of purchase requisitions with automatic conversion to purchase orders, with detailed cost and variance tracking through material receipt and put-away
- Contains full visibility into the customer order management process, with simplified data entry screens throughout
- Offers front- and back-end visibility allowing vendors to anticipate your requirements, and customers to enter orders via self-service portals
- Delivers “dashboards” for single-view knowledge of customer, vendor and product data

The MXP Distribution Management Suite modules provide end-to-end control of your inventory, in real time:

Purchasing

- ▶ Maintain detailed item/vendor pricing and numbering information, allowing the Purchasing Department to eliminate errors in POs while locating the best sources.
- ▶ Control the requisition process with multiple sign-offs and price checks.
- ▶ Issue blanket orders and release as required.
- ▶ View complete audit trails of purchases and receipts.

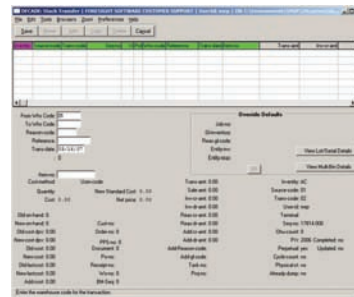

- ▶ Automatically or manually allocate inventory to orders.
- ▶ Identify boxes or pallets on shipments via printed labels, barcodes or RFID chips.
- ▶ Select the most appropriate shipping method or carrier based on price or past performance.

*Vendor Portal

- ▶ Offer your vendors a web-based view into your demand cycle, with individualized feedback supporting fulfillment pricing and scheduling.
- ▶ Manage vendor supply in near real-time, and take control of exceptions in quantities, delivery dates and quality issues.

Inventory Management

- ▶ Create product groups, items, warehouses and bins to fit your specific environment.
- ▶ Determine cost methods for inventory valuations, and have real-time data available in the GL 24x7.
- ▶ Take inventory annually, or on a scheduled cycle.
- ▶ Support storage in bulk, by lots, or individual serial number.

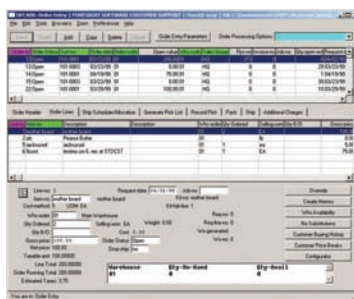

*ERPxTEND® Customer Portal

Open a web-based storefront to allow your customers to research product information, view order fulfillment, and buy online. You set the limits as to which customers can view or modify specific information, and retain complete control over the demand flowing from the customer into the organization.

Order Processing

- ▶ Create individual or blanket customer orders, with automatic (overridable) pricing.
- ▶ Support drop-shipping from your vendors, or ship to multiple locations on multiple schedules on a single order.
