

MXP Financial Management Suite

Start competing with a rock-solid foundation.

A basic element of every profitable enterprise is a firm understanding of income and expense, assets and liabilities. The fiscal health of a business is core to its survival and is impacted by everyone in the organization. Foresight's MXP Financial Management Suite (FMS) provides a solid platform for handling transactions across the entire enterprise. Raw data is converted into useful information, which you can then transform into knowledge and strategy. And, as your business grows, MXP FMS grows too, offering rich capability for managing multiple divisions, multiple

companies and even multi-currency support should you expand internationally.

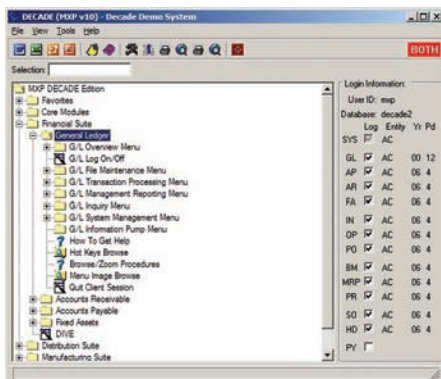

The MXP FMS concept of "entities" allows companies to take complete

control of the corporate structure, so financial information can be "sliced and diced" in virtually any format, and at any level of detail. Want to see a P&L for the Eastern Sales division? Need to roll up the entire

corporate actuals and compare budgets as of yesterday? Looking for the invoices that generated that big AR journal entry back in March? It's easy with MXP FMS. From the basics of budgeting to the complexities of double-declining balance fixed asset depreciation to the ability to design unique Financial Statement formats, MXP FMS covers all the bases.

The MXP Financial Management Suite:

- ▶ Automatically generates financial transactions from operational ones
- ▶ Offers the ability to collect consistent, accurate financial data
- ▶ Allows you to "massage" data if required prior to posting
- ▶ Provides industry-leading abilities to drill down into financial information
- ▶ Keeps track of all financial data, from owner's equity to the net present value of the truck fleet
- ▶ Speeds the process of information retrieval by keeping all data in a consolidated location
- ▶ Removes the need for using hundreds of spreadsheets, while still allowing you to export spreadsheet data for specialized requirements with the click of a mouse

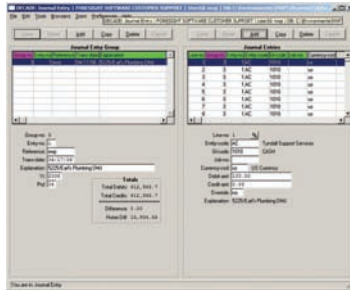

With MXP Financials I get the best of both worlds: solid, secure data and flexible reporting. Our response time for information has been cut in half.

The MXP Financial Management Suite includes modules that provide an enterprise-wide view of the financial position, in real time:

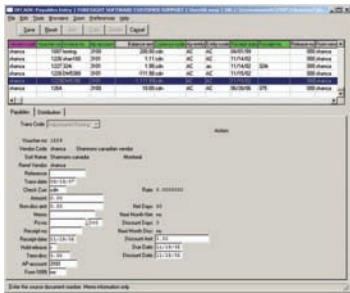

General Ledger/Budgeting

Define and control your business entity structure, accounts and balances. General Ledger/Budgeting drives the core of the enterprise, providing detailed transaction capabilities, real-time inquiry functions, and completely customizable management reporting capabilities.

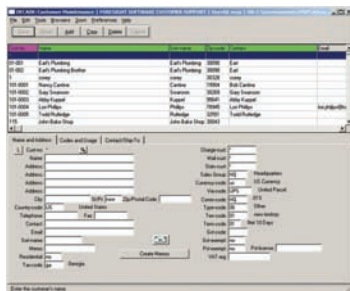

Accounts Payable

Understand where your money is going, and turn that knowledge into lower costs. Accounts Payable manages complete vendor information, with vendor-level price tables and item-numbering schemes. Ensure that payment terms are met and have the knowledge at your fingertips to negotiate effectively with the vendor community.

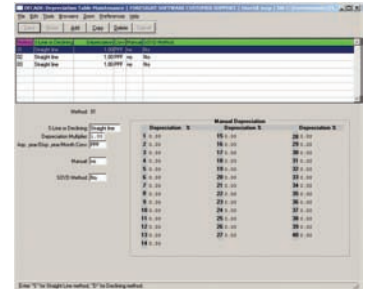

Accounts Receivable

Know which customers are paying on time and which ones are generating the highest profits. Complete integration with our Distribution Suite ensures that transactions are never missed, and that complete visibility into the process of converting sales into cash is always available.

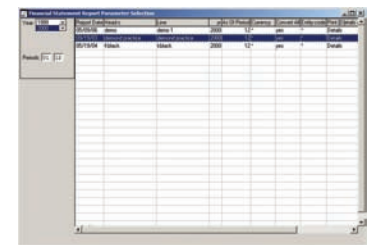

*Fixed Assets

An often-overlooked function of standard ERP systems, the management of assets (from land and buildings to high-dollar manufacturing equipment) can have a major impact on net worth. The Fixed Assets module helps to identify assets, determine their cost and value, and generate appropriate tax information. When combined with Foresight's Service Management Suite, you can establish Preventive Maintenance programs that help ensure consistent up time as well as capturing the costs of servicing physical plants and equipment.

*DIVE® Drill-down Financial Reporting

Our Financial Statement Report Designer provides complete control of information on P&Ls, Balance Sheets, TBs, etc. Create summary level entries and custom column calculations, and save as many templates as you'd like for instant retrieval. Our proprietary DIVE® functionality captures financial statements as they are generated and stores them in a "virtual file cabinet". Then, when access is needed, you can open the stored statement online, and drill down into the individual transactions that generated the line entries. Your staff will save hours and days of difficult manual research.
